                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABD54131-ABD56305), and also concompasses polypeptides 90% identical and polynuclectides 95% identical concompasses polypeptides 90% identical and polynuclectides 95% identical recombinant vectors and host calls comprising human ovarian antigen concompasses polynucleotides and polypeptides in diagnosing, of ovarian antigens, and the use treating, prognosing or preventing various ovary and/or breast-related clasorders. Such conditions include ovarian cancer and breast cancer, and disorders Such conditions include ovarian cancer and breast cancer, and disorders (e.g., infertility, disorders of pregnancy, anovularion, collocated (e.g., infertility, disorders of pregnancy, anovularion, collocated (e.g., infertility, disorders of pregnancy, anovularion, collocated (e.g., infertility, disorders of pregnancy, anovularion, collocated (e.g., infertility, disorders), inflammatory conditions (e.g., mastifis, ophoritis and disorders, infertions autoimmune ophoritis, systemic lupus erythematosus), candinated disorders (e.g., anaemia), cardiovacular disorders (c.g., anaemia), cardiovacular disorders (c.g., anaemia), cardiovacular disorders polynucleotides may also be used in screening for compounds which curtain antigen expression or activity. The polynucleotides may be used an screening for compounds which curtain antigen expression or activity. The polynucleotides may be used as food additives or to prepare antibodies cuseful in disease diagnosis, drug targeting and phenotyping. The present
                                                                                                                                                                                                                                                                                                                                                                                    ovarian cancer; breast cancer; tumour; reproductive system disorder; pinfertility; pregnancy disorder; anovulation; polycystic ovary syndrome; pCOS; ovarian cyst; dysmenorrhoea, endocrine disorder; infection; inflammatory condition; immune disorder; blood disorder; infection; dardiovascular disorder; respiratory disorder; neurological disorder; gastrointestinal disorder; urinary system disorder; drug screening; gene therapy; chromosome mapping; forensic analysis; antibody preparation; cytostatic; immunomodulatory; neuroprotective; antiinflammatory; gynaecological; reproductive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                  Description

Patent No. US200201419891

Patent No. US200201419891

GENERAL INFORMATION:

APPLICANT: Kricek, Franz

APPLICANT: Kricek, Franz

APPLICANT: Vogel, Monique

TITLE OF INVENTION: ANTIBODIES WHICH INHIBIT THE BINDING OF IMMUNOCLOBULIN E TO

TITLE OF INVENTION: ITS HIGH AFFINITY RECEPTOR

TITLE OF INVENTION: ITS HIGH AFFINITY RECEPTOR

TITLE OF INVENTION INMER: DS/09/974,449

CURRENT APPLICATION NUMBER: DCT/EPD0/03288

CURRENT PILING DATE: 2000-04-12

NUMBER OF SEQ ID NOS: 62

SOFTWARE: FRRENCE: FRRENCE: A HIGHOMS VERBION 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ဥ

Patent No. 6048704
GENERAL INFORMATION:
APPLICANT: Martin David Tilson
TITLE OF INVENTION: PROTEINS ASSOCIATED WITH ABDOMINAL AORTIC ANEURYM (AAA)
TITLE OF INVENTION: DISEASE, AND DIAGNOSTIC AND THERAPEUTIC USES THEREOF
NUMBER OF SEQUENCES: 61
CORRESPONDENCE ADDRESS: 61
ADDRESSEE: Cooper & Dunham Lip
STREET: 1185 Avenue of the Americas
CITY: New York
STATE: New York
CITY: New York
COUNTRY: U.S.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 45. Application US/08812586

Patent No. 6048704

GENERAL INCPEMATION:
APPLICANT: Martin David Tilson

IIILE OF INVENTION: PUBLIED AND RECOMBINANT ANTIGENIC

TITLE OF INVENTION: PROTEINS ASSOCIATED WITH ABDOMINAL AORTIC ANEURYM (AAA)

TITLE OF INVENTION: DISEASE, AND DIAGNOSTIC AND THERAPEUTIC USES THEREOF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 AGATGTGACATCCAGATGACCCAGTCTCCATCCTCACTGTCTGCATCTGTAGGAGACAGA 120

Patent No. 6407213

GENERAL INFORMATION:

APPLICANT: Carter, Paul J.

APPLICANT: Carter, Paul J.

APPLICANT: Dresta, Leonard G.

TILLE OF INVENTION: Method for Making Humanized Antibodies

NUMBER OF SEQUENCES: 26

CORRESPONDENCE ADDRESS:

ADDRESSEE: Genentech, Inc.

STREET: 1 DNA Way

CITY: South San Francisco

STATE: California

COUNTRY: USA

ZIP: 94080
